Plant Daffodils This Fall

Daffodils are the first major flowers to bloom in the spring. By nature they are informal flowers, and look best when grown in drifts, in the shrubbery or under the trees. They like to nestle among the roots of shrubs, and as they bloom before the leaves develop, they thrive in places which later in the season are well shaded. Plant the bulbs and do not disturb until they crowd; the bulbs may then be lifted and replanted over a much larger area. A purchase of bulbs is an investment which will pay in bloom for a lifetime.

CHEERFULNESS (Poetaz Narcissus) Double. Erect stems, each bearing a cluster of small blooms with broad, rounded creamy white perianth and full double center of creamy white and yellow.

DIANA KASNER (Barrii Narcissus). A pure white perianth and a large fluted yellow cup with blood red frill. Very fine

FRANCISCA DRAKE (Incomparabilis). The pure white petals are 1½ inches wide, tinted golden yellow at base. The cup opens yellow, changing to orange.

GLORY OF SASSENHEIM (Bi-Color). Rich yellow trumpet, fine white perianth; best bi-color for all-around planting.

HERA (Leedsii Narcissus). Broad petaled cream white perianth; star-shaped and deeply frilled cup of creamy white with a dainty edging of light primrose.

KING ALFRED (Trumpet). Immense deep golden yellow flower of wonderful substance. Trumpet deeply frilled. The King of the yellow.
